Accessing and Setting Up a VM

I used Remote Desktop Connection to connect to my VM (STU-503876-VM1) with my student number as the username and university password. After logging in, I checked for Git using git version, installed Git when needed (setting default branch to "main" and keeping default options), then navigated to the Documents folder, created a Deployment folder, and cloned my portfolio repository into it.

Accessing and Setting Up a VM

I successfully opened the VM using Remote Desktop Connection, then cloned my portfolio repository into the Deployment folder.

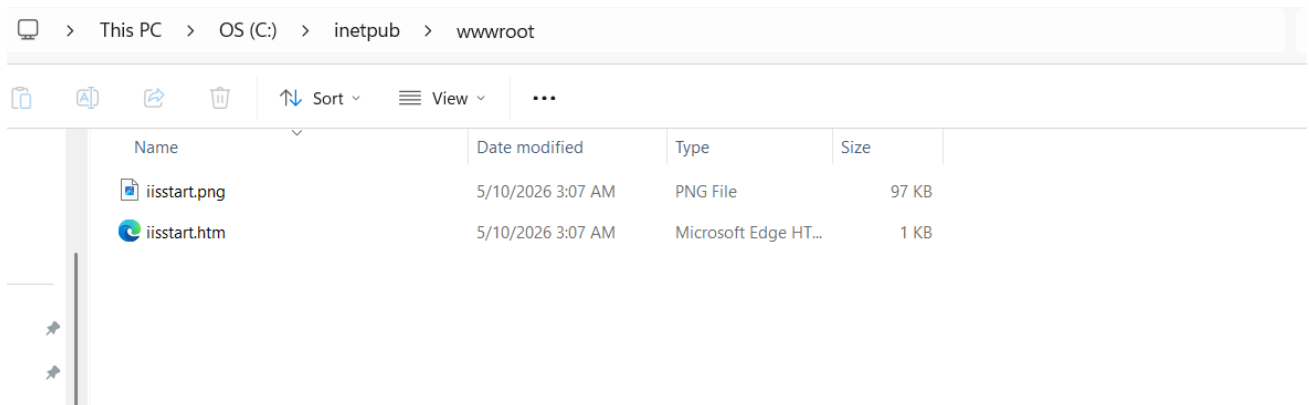

Setting Up A VM For Web Hosting

I checked that IIS was running by entering `Get-Service w3svc` in the terminal and confirmed the World Wide Web Publishing Service was active. Then I navigated to This PC → Local Disk (C:) → inetpub → wwwroot on the VM.

```
PS C:\Users\202503876> Get-Service w3svc

Status      Name      DisplayName
-----
Running     w3svc     World Wide Web Publishing Service
```

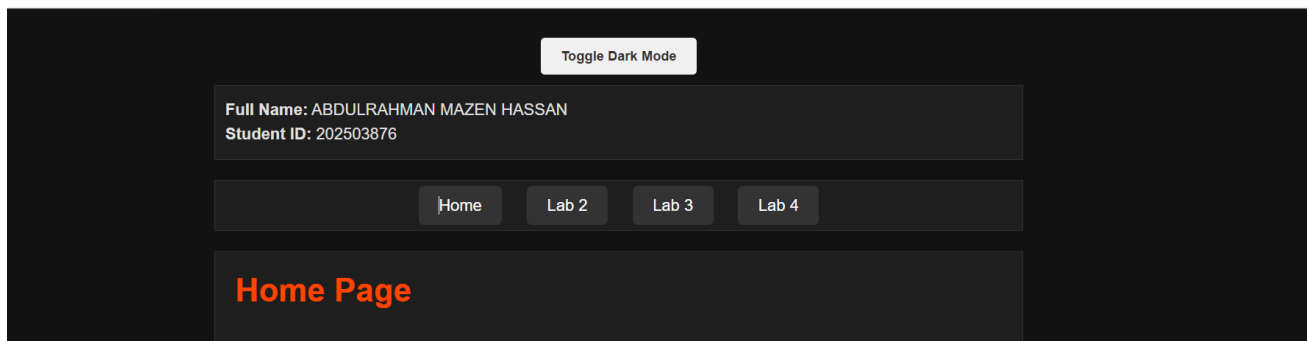

Deploying Website on IIS

I copied all files from my Deployment folder into C:\inetpub\wwwroot on the VM. Then I opened a browser on my local machine and entered <http://stu-503876-vm1.net.dcs.hull.ac.uk>, which displayed my website live from the VM.

http://stu-503876-vm1.net.dcs.hull.ac.uk

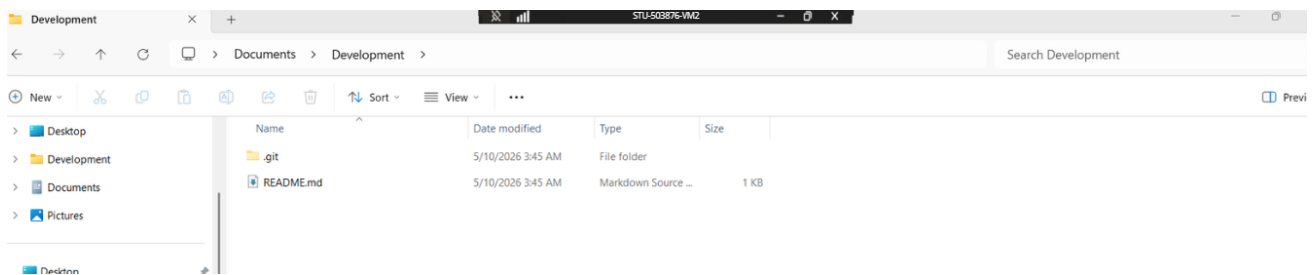

Click access, place your favorites here on the favorites bar. [Manage favorites now](#)

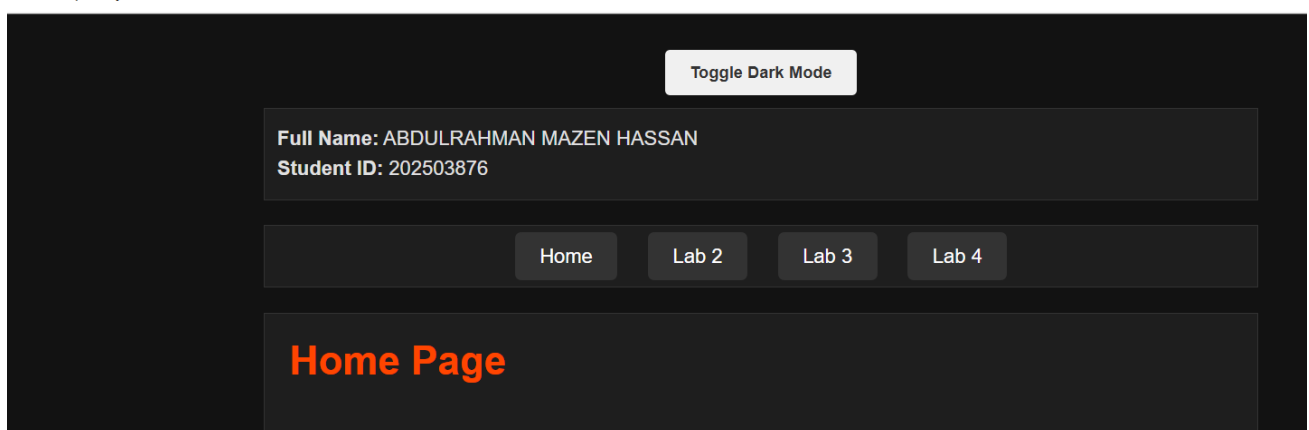

Setting Up a Development VM (VM2)

I opened a second VM named STU-503876-VM2. I created a Development folder, cloned my portfolio repository into it, then copied all files into C:\inetpub\wwwroot. I accessed the website at <http://stu-503876-vm2.net.dcs.hull.ac.uk>, which displayed my portfolio live from the development VM.

Editing a Development VM

I installed Visual Studio Code on STU-503876-VM2, opened my website from the wwwroot folder, and made a small change. When saving failed due to permissions, I clicked "Retry as admin" and the change saved successfully. My original website remained at <http://stu-503876-vm1.net.dcs.hull.ac.uk> and the updated version at <http://stu-503876-vm2.net.dcs.hull.ac.uk>. Having

both a development and deployment server allows testing changes safely on the development VM before pushing them live to the deployment server, preventing broken code from reaching users.

Simple Change Made: Added an emoji to the Home Page heading for better visual appeal.

And the screenshot shows the two opened together.
